arium® pro Ultrapure Water Systems
Application-Orientated and Flexible to Meet the Highest Demands

Description
The arium® pro series offers a flexible and modular system which, compared to conventional devices, demonstrates excellent cost efficiency.

All systems meet and exceed the ASTM Type 1 water quality standards and ensure the best reproducible results in their class. Up to 120 l of consistently high-quality ultrapure water with a conductivity of 0.055 µS/cm (≥ 18.2 MΩ cm) can be dispensed each hour. The ultrapure water is virtually microorganism-free when a Sartopore® 2 150 end filter is used.

The patented Sartorius technology, SD card slot, long service life, and low maintenance requirement distinguish the arium® pro systems as easy-to-use, efficient and reliable Type 1 ultrapure water systems.

Applications
- HPLC, GC-MS
- Biological applications e.g. Cell Culture
- Standard Applications such as preparation of solutions, media and reagents

Modular
The selection of five systems contains module components specially tailored to your application. arium® pro supplies the desired level of ultrapure water quality for any critical and standard applications.

Flexible
The space-saving installation of the device on, under, or above your workstation integrates it perfectly into any laboratory. The display-dispense unit can be flexible positioned.

Display with touch-function
Even the opening of the dispensing valve can be controlled by the unique display. Simply navigate intuitively in the easy-to-use and clear menu navigation by lightly touching the display – even with gloves.
Feed Water Quality
Water purified by reverse osmosis, distillation or Deionisation.1

- Input pressure 0 – 6.9 bar, recomm. > 2 bar
- Temperature 2 – 30 °C
- Specific conductivity < 100 µS/cm compensated to 25 °C
- TOC content < 50 ppb
- Turbidity < 1 NTU
- pH value 4 – 10

1 To operate arium® pro with non-treated drinking water the Universal Kit could be used in most cases. In order to verify the specifications of your feed water, please contact the Sartorius Application Support.

Technical Specifications

- Dimensions: 35.0 × 49.2 × 45.1 cm (Width × height × depth)
- Empty weight 17 – 19 kg, depending on system type
- Operating weight 27 – 29 kg, depending on system type
- Power supply 100 – 240 VAC (± 10%); 50 – 60 Hz, 130 VA (max.)
- Operating temperature 2 °C – 35 °C at max. 80% rel. humidity
- Storage temperature 5 °C – 45 °C at max. 80% rel. humidity
- Data output SD card slot², RS-232 interface

Feed Water Quality

- UV Lamp (185|254 nm)
- Conductivity measurement (inlet water)
- Pump
- Cartridge 1
- Cartridge 2
- Reject water outlet
- Conductivity measurement (product water)
- Ultra-filter
- Sanitization port
- Final filter 0.2 µm
- Product water

² Not applicable for arium® pro
arium® pro DI and arium® pro

Description
The arium® pro DI is a highly efficient water treatment system and the ultrapure water quality exceeds the ASTM Type 1 quality standard.

Water is purified by a three-stage process. In the first two stages, both organic and inorganic components are removed reliably from the feed water by using the specially developed Elemental Kit cartridges. The third purification stage is performed using a Sartopore® final filter, which is connected directly at the point of use and removes particles and bacteria.

The arium® pro offers an even more affordable alternative. Reduced to the essential features, it produces ultrapure water – without any compromises.

Product water quality
- Water purification methods: Adsorption by spherical activated carbon, deionization, optional final particle and sterile filtration
- Type of water: ASTM Type 1 ultrapure water
- Output: 120 l/h
- Water dispensing flow rate: 0.1 – 2 l/min, adjustable
- Volume controlled output: 2 l/min in 100 ml, 1 l or 5 l steps, depending on total dispense between 0.1 l and 60 l
- Volume accuracy: 3 % in the range of 0.25 l and 60 l
- Conductivity: 0.055 µS/cm compensated to 25 °C
- Resistivity: 18.2 MΩ cm compensated to 25 °C
- TOC content: ≤ 5 ppb
- Microorganism content: < 1 CFU/1,000 ml
- Particle content: < 1/ml

rüm® pro DI and pro systems for producing ASTM Type 1 ultrapure water
Equipment supplied: 1 arium® pro and Connection Set

Order Number Description
H2Opro-DI-T arium® pro DI Bench-Top system in a compact design for every laboratory workstation
H2Opro-DI-B arium® pro DI space saving Wall-Mounted system with integrated wall bracket
H2Opro-DI-D arium® pro DI Built-In system, space saving in every laboratory cabinet, with integrated wall bracket for display-dispense unit
H2Obasic-T arium® pro Bench-Top system in a compact design for every laboratory workstation
H2Obasic-B arium® pro space saving Wall-Mounted system with integrated wall bracket

1 Measured value output is adjustable to 25 °C compensated or non-compensated
2 When using a Sartopore® 2 150 end filter
3 Feed water < 50 ppb TOC content
4 At 2 bar pressure, depending on the connected accessories and end filter
5 Under constant operating conditions
**Description**

Like arium® pro DI, the arium® pro UV features three-stage purification technology. Yet it additionally uses photooxidation to remove organic components.

With two different wavelengths, the horizontally positioned UV lamp (185 | 254 nm) prevents microbial growth and reliably reduces organic compounds to a TOC value of ≤ 2 ppb.

Perfectly matched to support photooxidation technology, the Analytical Kit cartridges optimize water purification and specifically remove inorganic and organic substances.

The current TOC values are continuously measured by the optionally integrated TOC monitor and shown on the display.

Description
In addition to featuring highly efficient purification components, such as active carbon and highly effective ion exchange resin, the arium® pro UF ultrapure water system additionally includes a hollow-fiber ultrafilter. This ultrafilter uses crossflow technology to reliably remove endotoxins, microorganisms and particles, as well as DNases and RNases from ultrapure water. As a result, this filter makes the arium® pro UF ideal for use in cell cultivation, electrophoresis, and many other related applications.

Supported by the top-down flow technology incorporated into Biological Kit cartridges, the system produces ASTM Type 1 ultrapure water of the highest quality.

arium® pro VF

**Description**

This high-end unit delivers ultrapure water of the highest quality and combines the purification technology of the arium® pro UF and pro UV units all into one system.

The integrated, horizontal UV lamp (185|254 nm), together with a hollow-fiber ultrafilter, not only prevents microbial growth and reduces the TOC content to a minimum of ≤ 2 ppb, but also additionally removes endotoxins, microorganisms and particles, as well as DNases and RNases. As a result, it is the perfect solution for a large number of critical applications in the laboratory.

Current TOC values are continuously measured with the highest accuracy by the optionally integrated TOC monitor and displayed on the screen.

arium® Dispense Gun

Ergonomic Water Dispensing with an up to 3.7 m Working Radius

Description
The arium® dispense gun is an ergonomic, easy-to-handle dispensing unit that is excellently suited for dispensing ultrapure water.

Depending on the working environment, you can save space by mounting the dispense gun on the wall or on a stand that is height-adjustable up to 70 cm.

Moreover, the stand lets you work in a relaxed position and allows optimal adjustment to different sized sampling vessels. Thanks to the extended tubing, the work area has an expanded radius to up to 2.5 m away from the arium® unit and another 1.2 m to the stand.

It is also easy to install a sterile-grade filter (Sartopore® 2 150 capsule) with 0.2 µm pore size for guaranteed sterile and particulate-free water dispensing.

**arium® Multifunction Stand**

*All Menu Functions Directly at the Dispensing Port*

- Visual quality control directly at the water-dispensing port
- System control directly at the work place
- Optimal customization to the variously sized sampling vessels
- Water dispensing using the slider
- Radius extends up to 2.5 meters
- Sterile-grade filters connectable

**Description**

The multifunction stand not only extends the working radius up to 2.5 meter from arium® ultrapure water system, but at the same time enables the control of the unit and monitors the ultrapure water quality directly at the dispensing port. The bracket is integrated in the stand to which the flexible arium® display is mounted. This creates a combination that provides complete access to the menu with all its functions along with the practical convenience of a dispense gun.

Moreover, the over 70 cm height-adjustable stand lets you work in a relaxed position one-handedly and allows optimal adjustment to different sized sampling vessels.

It is also easy to install a sterile-grade (filter Sartopore® 2 150 capsule) with 0.2 µm pore size for guaranteed sterile and particulate-free water dispensing.

**arium® Water Guard**

*Early Detection of Leakages Protects the Laboratory*

- Highly sensitive optical sensor
- Audiovisual alarm signals
- Automatic water-stop in case of leakage
- High-grade material, non-corrosive
- Easy to install
- Integrated wall mounting bracket for magnetic valve

**Description**

Only the early detection of water leakages provides optimal protection against water damage in the laboratory. Leakages are registered by the highly sensitive optical sensor.

In contrast to conventional sensors, this sensor functions independently of conductivity measurement values as these are so low in the ultrapure water area that the activation of the guard is not guaranteed. Once a leakage is detected the water guard automatically locks the feed water inlet line. An acoustic warning is triggered immediately and the system status can be constantly controlled using the integrated LED display. The sensitive, optical sensors and high-grade materials mean that the arium® water guard is perfect for all ultrapure and pure water systems.

arium® pro Cartridge Sets
Pre-treatment and Post-treatment Cartridge Utilizing Top-Down Technology

Description
The cartridge sets are optimized for the removal of both organic and inorganic constituents. Every set has been designed specifically to match the unit and delivers ultrapure water that even exceeds the ASTM type 1 quality standard. Such consistently high water quality is a guarantee for optimal reproducibility of your results.

Optimized cartridge materials such as highly effective activated carbon coupled with a highly efficient ion-exchange resin deliver long lasting performance and thereby ensure long maintenance intervals.

The Top-Down-Flow technology produces ideal purification kinetics and prevents any mixing of cleaning media. The cartridge was designed with the applicable standards for flow rate in the cross section and contact time with the medium in mind.

arium® Sterile-grade Filter
Sterile and Particle-free Water Dispensing

Description
The arium® sterile-grade filter (Sartopore® 2 150) is a sterile, ready-to-use membrane filter capsule for the most stringent requirements. Sartopore® 2 150 membrane filter capsules contain a hydrophilic, heterogeneous polyethersulfone double membrane. It enables an excellent service life and output. The capsule is attached, by a quick connector, at the final position and reliably removes all particles. A hydrophobic PTFE membrane at the farthest point „upstream“ allows for easy and clean venting of the capsule.

All pleated Sartopore® 2 membrane filter units are validated as sterile filters for biopharmaceutical applications according to the HIMA and ASTM F-838-05 guidelines (documentation available). During the manufacturing process, every unit is tested for integrity in order to meet the highest quality standards and safety regulations.

Intended Use
On Dispense Guns and Display-Dispense Unit for system type:
arium® comfort I and comfort II
arium® pro, pro DI, pro UF, pro UV and pro VF
arium® 611
arium® bagtank Dispense Gun
arium® Dispense Gun

Order Number Description
5441307H4--CE--B arium® Sterile-grade Filter (Sartopore® 2 150 capsules), 0.2 µm pore size, qty. 5 units

- Excellent service lifetime and flow rate
- Integrity tested
- Validated acc. to HIMA and ASTM F-838-05
- Meets WFI quality standards acc. to USP incl. USP plastic class VI test
- Manufacture acc. to DIN ISO 9001
- Easy to install
- Automatic venting
- Certified quality
arium® UV Lamp (185 | 254 nm)
Ultrapure Water, Free of TOC

Description
The horizontally arranged UV lamp delivers especially reliable results. Unlike vertical units, the temperature gradient is less pronounced and does not affect the activity of UV waves. The two different wavelengths reliably removes organic substances (TOC or total organic carbon), effectively preventing microbiological growth. Organic compounds oxidize at 185 nm, whereas 254 nm prevents microbiological growth.

Technical Specifications
- Material: quartz glass
- TOC-content product water*: < 2 ppb

Intended Use
- arium® comfort I and comfort II
- arium® pro UV and pro VF
- arium® 611 UV and VF

* Feed water < 50 ppb TOC content

**arium® Ultrafilter**

**Ultrapure Water, Free of Endotoxins, DNases and RNases**

**Description**
The hollow-fiber ultrafilter utilizes crossflow technology to reliably remove bacterial endotoxins, microorganisms and particulates, as well as DNases and RNases from the ultrapure water.

The filters have been developed and manufactured according to DIN EN ISO 9001 | DIN EN 46 001 certified quality assurance system that meets the requirements of the FDA's Quality System Regulation 21 CFR Part 820. During the manufacturing process, every unit is integrity tested to meet the highest quality standards and safety regulations.

**arium® Biofilm Cleaning Syringes**  
**Effective Removal of Microorganisms for a Long Lifetime**

**Description**
With this cleaning agent, the regular removal of the biofilms that develop during water purification is easy and effective. Biofilms especially develop on the concentrate side of ultrafilters. If biofilms are removed regularly, higher flow rates and longer lifetimes result.

This highly effective solution is prefilled in 50 ml syringes and directly ready for use. It does not form any trihalogenmethane, chloramines, hydrochloric acid or chlorate. The cleaning agent is non- caustic and degrades into NaCl and water.

**Technical Specifications**

**Ingredients**
- Sodium hypochlorite
- Hydrogen peroxide
- Sodium chloride
- Hypochlorous acid

**Intended Use**
arium® pro DI, pro UF, pro UV and pro VF
